Cena: 176,00 KM

Cordial CES O2 passive DI-box

In line
with

the latest trend, i.e. keyboards, samplers and effects units with stereo outputs, CORDIAL's passive DI-box CES O2 allows you to easily connect line level outputs to balanced mixing desk inputs with microphone level sensitivity. Another convenient feature is also the option to loop signals through - not only via the 6.3 mm plug but also via RCA(Cinch) format, which is often found in semi professional CD/Mini Disk/Cassette/DAT players. So

the CES O2 features a completely ground separated inner design and that means that two mono signals can be transmitted without any cross talk. The CES O2 doesn't require any batteries or phantom feed. The technical specifications of the transformer meet studio standards.
